Hi Zach,

Good news! The course you mentioned can replace the 605.7x requirement, but not the 625.7x one. Let me know if you have any questions!

Hi Zach,

I believe you will have to stick to 605/625 prefix courses, but I'm trying to chase it down for you.

Can you confirm the semester and year you started the program? Let me pull up the exact requirements.

Hi Miriam,

That makes sense, thank you! I just have one more question.

I'm looking at a course titled "*Data Science: Modeling and Analytics*" with the course code **685.701**. While it doesn't begin with 625 or 605, it is a 700-level course, which seems to be the main requirement for the remaining two electives I need to complete.

Could you please confirm whether this course would count toward fulfilling one of those elective requirements?

Zach

Hi Zachary,

They will not, you must take those electives as 605.7x and 625.7x, 700-level classes.

Hi Miriam,

Thank you for the quick response!

I've attached a screenshot showing the two remaining electives required for my degree based on the Stellic degree audit. It looks like one elective needs to be a 625.7xx-level course and the other a 605.7xx-level computer science elective.

The three courses I'm interested in are:

- **Cloud Computing** – 605.635
- **Introduction to Generative AI** – 705.605
- **Time Series Analysis** – 625.695

Could you let me know which of these, if any, can be used to fulfill the two remaining elective requirements?

Best regards,
Zach

Hi Zach,

Just a heads up that Stellic is a new tool and not entirely up to date yet. You are not responsible for the updated requirements – you can stick the ones from when you started your degree. If you do want to take some of the newer courses, it is possible. Generally, the course codes have to be in the same format – i.e., you can sub a 605.6x for another 605.6x course or a 625.6x course for a 625.6x course, and so on. If you give me more details on which course you'd like to sub out for which requirement, I can let you know.

Thanks!
Miriam

Subject: Clarification on Data Science Masters Elective Courses

Hi Miriam,

I was reviewing my degree audit alongside the official JHU Data Science program website and noticed some discrepancies between the courses listed in my audit and those currently offered. It looks like the program has been updated since I enrolled, with new courses and the addition of focus areas that weren't part of the curriculum when I started.

I'm particularly interested in a few of these newer courses, specifically Time Series Analysis, Introduction to Generative AI, and Cloud Computing, and wanted to confirm whether taking a combination of these would fulfill the two remaining elective requirements for my degree.

Could you please advise on whether these courses would count toward my current degree requirements, or if there are any restrictions I should be aware of?

Thanks so much for your help!

Best,

Zach
